**Coopers®**  
**Permatrace ®**  
**COBALT PELLETS FOR CATTLE**

**DIRECTIONS FOR USE:**

**Contraindications**

**This product is contraindicated for calves under 8 weeks of age.**

**DOSE:**

**Important: Do not use excessive force when dosing in order to avoid trauma and damage to the throat of the animal.**

1. Beef Cattle and young growing Dairy Cattle - 1 pellet per year. Provide one pellet as soon as convenient after 8 weeks of age.
  2. Milking Dairy Cows - 1 pellet twice per year. Dose 1 pellet at drying off and again 3 months after calving.
- Dose first calf heifers about 3 months before calving and thereafter as for cows.

**WITHHOLDING PERIOD:** Zero (0) days.

**TRADE ADVICE:**

**EXPORT SLAUGHTER INTERVAL (ESI):** Zero (0) days.

**GENERAL INSTRUCTIONS:**

To be effective the pellet must be swallowed. It is recommended that pellets be administered using the Coopers® Cattle Pellet Applicator. It is important to carefully read the applicator use instruction leaflet enclosed in container before use.

It is recommended that a steel grinder be administered when treating cattle with the combination of Permatrace pellets outlined in the table below. This will keep the surface of the cobalt pellet clean and active by preventing a coating building up on the surface of the pellet. Steel grinders are available from Coopers Animal Health.

## **COOPERS® CATTLE PELLET APPLICATOR** **INSTRUCTIONS FOR USE**

Instructions relating to use of the COOPERS® CATTLE PELLET APPLICATOR are outlined below. For safe and effective administration of COOPERS® PERMATRACE® cattle pellets and capsules, these instructions must be followed:

### **Cattle Pellet and Capsule Applicator Instructions for Use:**

1. To be effective, cattle pellets and capsules must be swallowed. It is recommended that pellets be administered using the COOPERS® CATTLE PELLET APPLICATOR (See picture).

2. When loading the applicator, use slight pressure to pass each pellet underneath the plastic retaining tube into the base of the nozzle.
3. Immobilize the head of the animal. This is best carried out in a crush with a bail gate at the end.
4. Stretch the animal's head forward, open the animal's mouth and PASS THE GUN BARREL ALONG THE MIDDLE OF THE ROOF OF THE MOUTH AND OVER THE BASE OF THE TONGUE. The tongue may have to be pulled aside if it obstructs the applicator.
5. When the applicator is in the correct position (see picture) completely squeeze the trigger to release the pellets. The cattle should swallow these easily without distress. Holding the mouth closed, after the applicator has been withdrawn, may assist with swallowing.

<b>Registered Product Name:</b> <b>Coopers Permatrace Cobalt pellets for cattle</b>	<b>Page 5 of 5</b>

<b>Panel labels, text above the header and below the footer are not included in this label text.</b>	

6. Care should be taken when administering pellets to young cattle. The barrel may not need to be inserted as far as for adult cattle. NEVER FORCE THE APPLICATOR INTO THE MOUTH.
7. Under no circumstances should undue force be applied if any obstruction to ejection of the pellets or capsules is encountered. Withdrawing the applicator slightly and re-positioning it correctly will ensure easy and safe pellet administration.

**For further information on use of the applicator, call Coopers Customer Service on 1800 226 511.**
