Coopers®
Permatrace®
COPPER 20
CAPSULES FOR CATTLE

DIRECTIONS FOR USE:

Contraindications:

This product is contraindicated for calves weighing less than 200kg or under 1 year old. Not to be administered to cattle of unknown copper status or those treated with other sources of copper.

Not to be used in conjunction with selenium supplementation unless deficiency of both copper and selenium has been confirmed.

This product is contraindicated for use in cattle suffering from jaundice and other liver disorders such as liver fluke, or stock grazing plants containing toxic alkaloids, eg: Heliotrope, Ragwort, Patersons Curse (Salvation Jane).

Seek advice of veterinary or cattle husbandry specialist to ascertain copper deficiency and type of treatment required for cattle under consideration.

DOSAGE:

Important: Do not use excessive force when dosing in order to avoid trauma and damage to the throat of the animal.

Adult cattle over 200 kg: one capsule per head annually.

WITHHOLDING PERIOD: Zero (0) days.

TRADE ADVICE:

EXPORT SLAUGHTER INTERVAL (ESI): Zero (0) days.

GENERAL INSTRUCTIONS

Dose cows early in pregnancy to allow protection of young calves against copper deficiency.

Unless corrective treatment is required immediately, the preferred time of treatment is late Winter or early Spring.

To be effective the capsule must be swallowed. It is recommended that capsules be administered using the Coopers® Cattle Pellet Applicator. It is important to carefully read the applicator use instruction leaflet enclosed in container before use.

In areas where liver fluke are endemic stock should be treated with a highly effective flukicide at least 3 weeks before dosing with this copper supplement.

For more information, call Coopers Customer Service on 1 800 226 511.

SAFETY DIRECTIONS: May irritate the eyes and skin. Avoid contact with the eyes and skin. Wash hands after use.

FIRST AID:

If poisoning occurs, contact a doctor or Poisons Information Centre. Phone Australia 131126.

COOPERS® CATTLE PELLET APPLICATOR **INSTRUCTIONS FOR USE**

Instructions relating to use of the COOPERS® CATTLE PELLET APPLICATOR are outlined below. For safe and effective administration of COOPERS® PERMATRACE® cattle pellets and capsules, these instructions must be followed:

Cattle Pellet and Capsule Applicator Instructions for Use:

1. To be effective, cattle pellets and capsules must be swallowed. It is recommended that pellets be administered using the COOPERS® CATTLE PELLET APPLICATOR (See picture).

2. When loading the applicator, use slight pressure to pass each pellet underneath the plastic retaining tube into the base of the nozzle.
3. Immobilize the head of the animal. This is best carried out in a crush with a bail gate at the end.
4. Stretch the animal's head forward, open the animal's mouth and PASS THE GUN BARREL ALONG THE MIDDLE OF THE ROOF OF THE MOUTH AND OVER THE BASE OF THE TONGUE. The tongue may have to be pulled aside if it obstructs the applicator.
5. When the applicator is in the correct position (see picture) completely squeeze the trigger to release the pellets. The cattle should swallow these easily without distress. Holding the mouth closed, after the applicator has been withdrawn, may assist with swallowing.

Panel labels, text above the header and below the footer are not included in this label text.	

6. Care should be taken when administering pellets to young cattle. The barrel may not need to be inserted as far as for adult cattle. NEVER FORCE THE APPLICATOR INTO THE MOUTH.
7. Under no circumstances should undue force be applied if any obstruction to ejection of the pellets or capsules is encountered. Withdrawing the applicator slightly and re-positioning it correctly will ensure easy and safe pellet administration.

For further information on use of the applicator, call Coopers Customer Service on 1800 226 511.
